

PCA plot showing the relationship between 15 countries (labeled by country code) and five variables. The x-axis represents PC1 (43.3% explained var.) and the y-axis represents PC2 (25.1% explained var.).

The variables are represented by vectors originating from the center:

- Military spending (as % of GNI) (R)
- Refugees and IDPs deaths from conflict (R)
- Historical deaths from conflict (R)
- Rule of law (C)
- Attitudes on violence against women (C)

The countries are grouped into five clusters, each represented by a colored circle:
